NF3.2

Scanner

Digitizing Weld radiographs quickly along with high quality and precision.

Device features:

1. Capable for wide range of radiographs film's length (10cm to 1.2m)
2. Automatic and Manual light adjustment in digitization process
3. Radiographs film Digitization speed of 20cm per second.
4. No longer need to archive the original films.
5. Digitizing 15 films at once.

Technical Specifications:

Light source : LED

scan resolution : 250 dpi

Density range : 0.5 to 4

Pixel depth : 8 bit grayscale

Film size : Min: 15 cm - 70 mm width - Max: 200 cm - 100 mm width

Weight : 1.7kg

Dimensions : 148x263x128mm

Power : 12v

Viewer

Power input: 12 v

Light source: LED

Device frame material: Metallic

Light valve material: polycarbonate

Light intensity control: controllable with volume

External dimensions: 66×175×330mm

Light valve dimensions: 100×200mm

Equiped with a filme densitometer probe and display the measured result concurrently.

Adjustable valve width according to film width (7 to 10 cm).

Adjustable stand for positioning the device in the right angle during the interpretation.

Weld Radiographs Images Archiving Software

Direct connectivity with Weld Radiographs Digitizing device. easy synchronized to transfer data scanned by film digitizer device. Archiving data base on; Project name, Contractor name, Report number and etc. classifying films Images by Year, Month, Place of project, Report number and Weld Information.

Search reports base on;

- Report date, shooting date, project name, radiograph name, area, report number, analysis status.

viewing reports and weld list;

- presenting daily reports and latest searched results at the status bar
- View the Information report.
- View the list of weld report.

Viewing film Images;

- Observing overlap of films.
- Display all the weld reports simultaneously.
- Report the weld Interpretation.
