## Vacuum Filtration System

Vacuum filter holder is made by argon arc welding process with stainless steel 316 quality grade. In comparison with glass filters, these types of filters are not broken and have advantages such as easy to handle and longer lifetime.

### PRODUCT SPECIFICATIONS :

Material:	Stainless steel 316
Filtration area:	13.5 cm <sup>2</sup>
Membrane filter size	47 mm
Funnel Capacity(mL)	500 mL

### Applications:

- Protect your instrument and column from costly damage by clarifying all your HPLC solvents and buffer solutions before use.
- Particulate & microbiological filtration of liquids.
- Ideal for filtrations small to medium volumes of liquids for laboratory analysis.
