

100bp DNA Ladder

Cat.No. M1051-50

Storage: at 4°C for six months; at -20°C for two years

Concentration: 0.10 mg/ml (100 ng/μl)

Description

The 100bp DNA Ladder is composed of eleven linear double stranded DNA bands. This ready-to-use product is premixed with 1xDNA loading buffer. Based on experiment requirement, 5μl marker can be directly loaded for gel electrophoresis. To provides simple operation and produces clear image. For easy reference on agarose gels, the 500 bp band (100 ng/5 μl) is brighter than the other bands (50 ng/5 μl).

Advantage

Suitable for accurate determination of the size of DNA fragment within the range of 100 bp-1000 bp.

Composition

100 bp, 200 bp, 300 bp, 400 bp, **500 bp**, 600 bp, 700 bp, 800 bp, 900 bp, 1000 bp, 1500 bp.

Storage Buffer

10 mM Tris-HCl (PH 8.4), 10 mM EDTA, 0.02% bromophenol blue, 5% glycerol

Instructions for Use

- Load 100 bp DNA Ladder on the lane on a 2-3% agarose gel (load 1 μl marker for 1 mm lane, increase the loading volume for wider lane).
- Suggested electrophoresis conditions: 2-3% agarose gel, voltage 4-10 v/cm.
- Stained with nucleic acid dyes, visualize the bands under exposure to ultraviolet light.

Notes

- Completely thaw and mix well before use.
- Please change the electrophoresis buffer in time and use freshly-prepared gel to avoid adverse effect on the result.
