

Technical Data Sheet

BEX100030 Acetonitrile Gradient grade for liquid chromatography

BEXsolve

General product Information:

CAS number	75-05-8
Synonyms	ACN, Methyl cyanide, Ethyl nitrile, Cyanomethane
Overview	With their high degree of UV transmittance, low particle count, low acidity and alkalinity and low evaporation residue level, BEXsolve solvents are ideal for reproducible separations. Since separations are normally carried out under gradient conditions in analytical HPLC, we offer solvents in "gradient grade" as well as "isocratic grade". This enables to minimize the gradient effect of the solvent involved.
