

FMC-NKS106-PCI-A High Pin Count FMC and QSH Carrier Virtex-6 Processing PCI Card

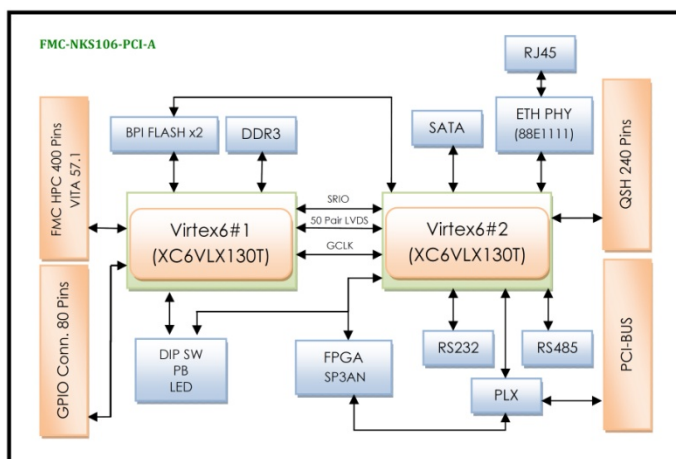

Description

The FMC-NKS106-PCI-A board is a high performance FMC industrial carrier card based on the Xilinx Virtex-6 LX130T FPGA family and supports 32-bit or 64-bit PCI bus data paths and Ethernet10/100/1000. This board also provides a developed platform for designing and verifying Virtex-6 FPGA based PCI and stand-alone applications. Communication with a host computer via the PCI bus and other interfaces enables users to control the card, modify algorithm settings and process real-time signals. The on-board FPGA Mezzanine Connectors (FMC) and QSH can make a high bandwidth data transfer channel with VITA 57.1 and QSH/QTH standard modules.
