

NKS-V016-A Stand-Alone Board

Virtex-6 & DSP High Performance Processing Platform

8- Channel 16-bit ADC 125MSPS

4- Channel 16-bit DAC 1GSPS

Description

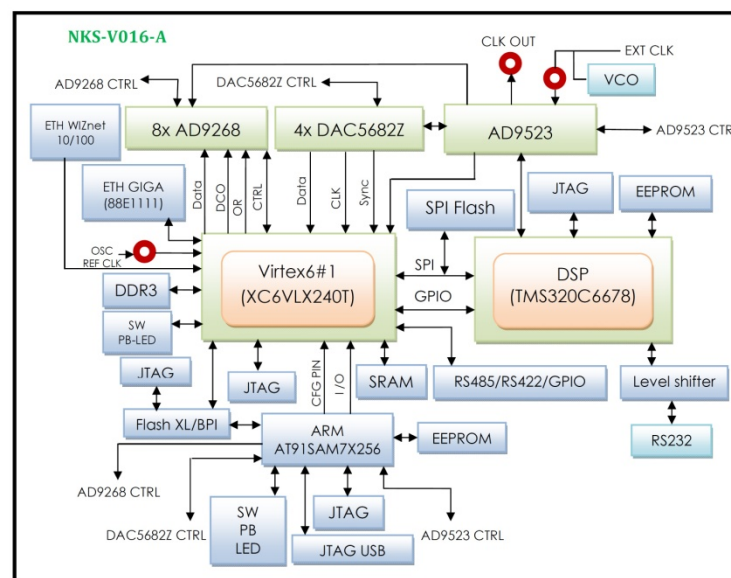

The NKS-V016-A processing board is a high performance industrial single card dedicated to high performance data acquisition and communications based on the Xilinx Virtex-6 LX240T FPGA family. The NKS-V016-A board enables designers to prototype high-performance digital transceivers. The board includes a DSP Processor (TMS320C6678) which incorporating the new and innovative C66x DSP core, this device can run at a core speed of up to 1.25 GHz. Additionally four D/A channels 16 bit resolution at maximum rate of 1GSPS per channel and eight A/D channels 16 bit resolution at maximum rate of 125 MSPS per channel are available. The sample clock can be supplied from PLL clock distributor, externally through a coax connection or supplied by an internal clock source.
