

**Content:**

Each vial contains **STRAV**, a buffered solution of Streptavidin protein, with a purity required for immunological tests and molecular analyses.

**Description:**

Streptavidin is a non-glycosylated protein with a very high affinity for biotin. Due to its high affinity for biotin, it is used to bridge biotinylated probes and biotinylated enzymes.

**Applications:**

Enzyme conjugates and complexes; Southern blots and other methodologies related to DNA and RNA analysis; Western blots; and purification of proteins or other antigens with biotinylated antibodies or lectins by use of immobilized Streptavidin.

**Storage and consistency:**

Store at 2-8 °C. Liquid refrigerated form remains stable for more than 2 months.

Do not freeze the solution.
