

ET-Adsorb®

Ecological Ethidium Bromide Removal System

The ET-Adsorb[®]Ethidium Removal System provides an elegant and easy way to remove large quantities of Ethidium from contaminated inorganic solutions. The cartridge has a total capacity of at least 1 g of Ethidium. This equals to 1,000 l of a typical electrophoresis buffer or staining solution (at a concentration of 0.5 µg/ml

Saturated cartridges can be disposed of via incineration.

Ideal for:

- ✓ Sustainable handling of Ethidium Bromide solutions
- ✓ High binding capacity: at least 1 g of Ethidium per cartridge, or 1,000 l of buffer or staining solution (at a concentration of 0.5 µg
- ✓ Easy to use: no pumps nor valves
- ✓ Easy exchange of cartridges
- ✓ Buffer reservoir of 4 I
- ✓ Flow rate: approximately 2.0 I/hour
- ✓ Cartridge disposal via incineration
